Berlin, 16 September 2026

Dear Lovehoney Group Hiring Team,

I am writing to apply for the Working Student – Legal Operations & AI Automation role in Berlin. I am currently pursuing an MSc in Data Science at the University of Europe, and I build automation and AI tooling as my primary way of working, which is exactly the mix your posting asks for: someone who can keep a process running cleanly and is genuinely hands-on with AI tools rather than just curious about them.

The clearest match is a project I built and shipped myself: JobPilot, a multi-agent pipeline (LangGraph, orchestrating Claude through LangChain) that automates a real administrative workflow end to end – extracting requirements from a document, checking claims against a source of truth, and rejecting anything unverified before it goes out. That last part, a hard validation gate that blocks unverified claims rather than trusting a draft, is the same instinct your posting is asking for when it talks about scalable, practical AI solutions for legal workflows: automation that a team can actually trust with a real process, not a demo. I have also worked hands-on with prompting and LLM orchestration daily while building a retrieval pipeline (LangChain, hybrid search), so the "hands-on experience with prompting" you list is not new territory for me.

On the operational side, I spent 2.5 years as a Software Engineer at ValueMomentum, where I migrated policy, claims and customer data for a regulated insurance client and root-caused a recurring data-integrity defect – work that was detail-heavy, deadline-driven, and required tracking exactly what state each record was in, which is close in spirit to the ticket-tracking and deadline-tracking side of contract review operations. What I have not done is legal or contract administration itself – I want to say that plainly rather than imply otherwise. I am confident I can pick up e-signature workflows, filing conventions and deadline tracking quickly, the same way I picked up a new retrieval framework fast enough to catch and fix a silent regression in it, but I have not done this specific type of admin work before.

I am available now as a working student for the full contract duration, and open to full-time after graduation. I would welcome the chance to bring that combination of process discipline and applied AI tooling to your Legal team, and I am happy to discuss further at your convenience.

Sincerely,
Deepak Katukuri
