Merantix Momentum
AI Campus, Berlin, Germany

Dear Hiring Team,

I am applying for your Working Student, Full Stack role. The way Merantix Momentum works — acting as an external machine learning department, moving in rapid iterations to turn ML into production software across automotive, manufacturing, healthcare and more — is exactly the kind of place I want to build in. I like shipping real features that people use, not toy projects, and hardening them once they run.

My current project shows how I build. The RA Nutrition & Lifestyle App is a full-stack product I designed and built end-to-end: a React / Vite + Tailwind frontend on a FastAPI + PostgreSQL backend, with JWT authentication and token refresh, meal and symptom logging, and a rule-based recommendation engine over four normalized database schemas. The frontend is where I put real care — a data-dense weekly analytics dashboard (React Query + Recharts) built to stay readable, with considered empty, loading, and error states and a reusable component system. Alongside it I built a Retrieval-Augmented Generation application from scratch in about 270 lines of Python — no LangChain, no vector database — handling document chunking, embeddings, retrieval, and prompt assembly, with LLM inference on the same request / response pattern as OpenAI and Anthropic. That is where my curiosity about how ML actually gets deployed comes from.

My stack maps directly onto yours: Python and JavaScript / TypeScript on the frontend and backend, REST APIs with real auth and status codes, and SQL with schema design and migrations. Just as relevant, I bring 2.5 years of production software engineering — I have lived the team rituals this role names, working in an agile team with code reviews, sprint planning, and daily stand-ups, and shipping fixes through CI/CD. One honest note: my API work is REST rather than GraphQL, and I have written JavaScript / React more than strict TypeScript — both are close steps from where I am, and under senior guidance I will pick them up fast.

I am based in the Berlin area and available now as a working student for 20 hours a week alongside my Data Science MSc, on-site at the AI Campus, with the flexibility to move to full-time after graduation. I would welcome the chance to build AI-powered applications with your Full Stack team.

Best regards,
Deepak Katukuri
