mellow NOIR
Berlin, Germany

Dear Hiring Team,

I'm applying for the Working Student AI Automation & Systems position in your Berlin office. mellow NOIR's move from a strong D2C base into European expansion, built on genuinely differentiated R&D — active coffee-oil extraction from recycled grounds — is the kind of growth-stage, execution-first environment I want to build automation for.

My background is hands-on systems and AI automation, not just theory. I designed and built a RAG pipeline (Python, LangChain, hybrid BM25 + dense retrieval, pgvector) end to end — including a hand-rolled retriever I later reproduced on LangChain to validate it, catching and fixing a 6%-recall regression caused by a default tokenizer setting along the way. I also built a full-stack app (React, FastAPI, PostgreSQL) with JWT auth and a rule-based recommendation engine, so I'm comfortable across the API/webhook/integration layer your workflows would touch. Before my MSc, I spent 2.5 years as a Software Engineer at ValueMomentum, where I built and validated PL/SQL migration scripts moving a full insurance product line into a new system, and root-caused a recurring data-integrity defect in that pipeline — the kind of "find where the automation quietly breaks" work that maps directly onto error handling and monitoring for automated workflows.

I haven't used n8n, Make, or Zapier specifically, but I pick up new tooling fast — the LangChain migration above is a recent example of learning a new framework and validating it rigorously rather than just wiring it up.

One thing I want to name directly rather than gloss over: my German is currently A1/A2, still short of the C1 you're asking for, though I'm actively learning and fluent in English. If that's a hard requirement for this role, I understand it may not be the right fit yet — but I wanted to be upfront rather than let it surface later.

I'm currently a working student (MSc Data Science, University of Europe) and available now, based in the Berlin area. I'd welcome the chance to talk through how I could contribute to your automation and AI-agent systems.

Best regards,
Deepak Katukuri
