TECHNICAL SKILLS

Frontend & Web

HTML, CSS, JavaScript, TypeScript, React, Next.js, Vite, Tailwind CSS, Framer Motion, responsive design, component/design systems

AI-Assisted Development

Claude, ChatGPT / Codex, AI-assisted prototyping & iteration, prompt-driven build workflows

Backend & Data

FastAPI, PostgreSQL, REST APIs, PL/SQL, Java

Tools

Git/GitHub, Docker, CI/CD, Jupyter

EDUCATION

MSc Data Science
University of Europe, Germany
Sep 2025 – Present

BTech – CS & Engineering
MLRIT, India
Jun 2018 – Jul 2022

CERTIFICATIONS

PL/SQL – Database Management

Core Java – Software Development

OneShield – P&C Insurance

LANGUAGES

English – Fluent

German – A1/A2 (learning)

PROFILE

Web developer and Data Science MSc candidate who builds and ships real interfaces — from a self-built, fully animated Next.js/React/TypeScript portfolio site to a full-stack health product with a React/Tailwind frontend on FastAPI/PostgreSQL. Comfortable moving fast from brief to working page using AI-assisted coding tools (Claude, ChatGPT/Codex) without losing code quality. Backed by nearly 3 years of production software engineering — code review, sprint planning, CI/CD releases — and a habit of documenting components so a team can reuse and maintain them. Seeking a Website Design & Development internship in Berlin to build real pages for a live product.

PROJECTS

Personal Portfolio Site – Animated Web Build

Next.js · React · TypeScript · Tailwind CSS · Framer Motion · github.com/Deepak589/NextJs-Portfolio

- Designed and built a fully custom, animated single-page site end-to-end – hero, an interactive orbital experience timeline, tilting project cards, and a consistent glassmorphism design system – turning a from-scratch visual concept into responsive, production-shaped components.
- Built reusable UI primitives (button, card, badge, radial timeline, tilt card, animated text-reveal) as a small internal component library rather than one-off page code, so sections can be reused.
- Root-caused and fixed a live animation-timing bug in the hero's text-reveal component – a React state/interval race that left text visibly scrambled – by restructuring the effect to stop rebuilding its own timer every tick.
- Verified layout and interaction across desktop and mobile breakpoints (390px–1440px).

RA Nutrition & Lifestyle App – Frontend

React · Vite · Tailwind CSS · React Query · Recharts

- Built a responsive frontend end-to-end over a FastAPI + PostgreSQL backend, including a reusable Tailwind component system and a data-dense weekly analytics dashboard (Recharts) with explicit empty, loading, and error states.
- Translated raw meal/symptom-logging requirements into a working UI with JWT-authenticated flows, keeping the interface usable across screen sizes.

EXPERIENCE

Software Engineer

Mar 2022 – Nov 2024

ValueMomentum

- Shipped features across 2 production insurance applications on OneShield PAS end-to-end – from requirements translation with underwriting/claims stakeholders through QA/UAT and CI/CD release – in an agile team with code reviews and sprint planning.
- Built and validated PL/SQL migration scripts moving a full product line's policy, claims, and customer history onto a new platform, then diagnosed a recurring data-integrity defect and mitigated it with a scheduled backfill process.
