The Funky Monkeys
Berlin, Germany

Dear Funky Monkeys team,

I'm applying for the Website Design & Development Intern role. A performance company that treats its website as a real product – not an afterthought – is exactly where I want to build: hands-on pages that go live and get watched by real festival, corporate, and cultural clients, not exercises that sit in a drawer.

My own portfolio site shows how I work: a fully custom Next.js/React/TypeScript build with Tailwind CSS and Framer Motion, including an interactive orbital timeline, tilting project cards, a glassmorphism design system, and reusable UI primitives I documented as a small component library rather than one-off page code – checked across desktop and mobile breakpoints. I build this way for other people too: the RA Nutrition & Lifestyle App has a React/Vite/Tailwind frontend I built end-to-end over a FastAPI/PostgreSQL backend, with a data-dense analytics dashboard and explicit empty, loading, and error states, so it holds up outside the happy path. And I use AI-assisted coding tools – Claude, ChatGPT/Codex – as a daily part of how I move from brief to shipped page fast; I used Claude directly to help scaffold, iterate on, and debug my own portfolio site, including catching and fixing a real animation-timing bug in it this week.

Two honest notes on fit. I haven't worked in Figma, Webflow, WordPress, or Framer specifically – my build experience is code-first (HTML/CSS/JS, React, Next.js) rather than through a visual builder, though I pick up new tools quickly, as shipping a full Next.js/TypeScript site was itself a jump from my usual React/Vite stack. And technical SEO is something I'd be applying for the first time rather than bringing proven experience in – I'm ready to learn it on real pages rather than claim it upfront.

I'm based in Potsdam, near Berlin, currently in my Data Science MSc, and available now for a mandatory or voluntary internship with a schedule we can agree around my coursework. English is fluent; German is still A1/A2 and improving. I'd welcome the chance to help design, build, and document real pages for The Funky Monkeys.

Best regards,
Deepak Katukuri
