Dear Manova Partners Hiring Team,

I am writing to apply for the data, automation and AI position in the COO/CTO area at Manova Partners. I am studying for an MSc in Data Science at the University of Europe, and I have spent 2.5 years as a Software Engineer working on data that had to be correct. Your tasks, collecting and validating data, automating recurring work and bringing AI agents into daily use, are what I already do.

At ValueMomentum I migrated and consolidated policy, claims, premium and customer history for a regulated insurance client into a new system, writing and validating the PL/SQL scripts across four linked tables. I root-caused a data-integrity defect where one class of claims loaded empty, and automated a weekly backfill script to keep records current until the permanent fix landed. That is the same discipline you describe: data that is accurate, consistent and ready to use.

On the AI side, I build agents and test them properly. JobPilot is a 16-node LangGraph pipeline that rewrites documents and blocks any claim not backed by a verified source, covered by 238 pytest tests. My RAG pipeline was validated against a 55-question golden set, which is how I would approach testing prompts and gathering user feedback when rolling agents out across departments. I use Claude Code and other agentic tools regularly for coding, and I have shipped a live full-stack app with a weekly analytics dashboard, so recurring reporting is familiar work.

Two gaps I want to name directly. Excel has not been my main tool; I work in Python and SQL, and I would build up advanced Excel quickly on real reporting tasks. My German is A1/A2 and I am actively learning it; I can work fully in English, which you list as your working language, and I will keep improving my German.

I am available now as a working student and open to a longer engagement after graduation. I would welcome the chance to discuss how I can help your team.

Sincerely,
Deepak Katukuri
