Dear Ms. Fiedler and the S-Kreditpartner Hiring Team,

I am applying for the Werkstudent role in Datenanalyse & Künstliche Intelligenz. What draws me to S-Kreditpartner is the shape of the role itself: not just running analyses, but translating fachliche Fragestellungen from Risikomanagement and Banksteuerung into logic that is tested, validated, and defensible in front of Gremien and management — the exact discipline I already practice, just in a different industry.

For 2.5 years as a Software Engineer at ValueMomentum, I worked inside P&C insurance and surety-bond systems on OneShield PAS: writing and optimizing PL/SQL procedures for policy and endorsement data, translating requirements from underwriting and claims stakeholders into technical specs during sprint planning, then validating that decision logic through QA/UAT before it shipped. That is the same motion your role asks for — fachliche Fragestellung in analytische Methodik übersetzen, then prove it holds up — applied to credit risk and consumer finance instead of insurance.

Outside work, I build the data and AI tooling myself. I designed a full-stack analytics feature (FastAPI + PostgreSQL microservice backend, React frontend) with a weekly dashboard that turns raw logs into decision-ready insight — the same close-the-loop-for-decision-makers goal your dashboards and ad-hoc analyses serve. I also built a Retrieval-Augmented Generation pipeline from scratch in ~270 lines of Python, deliberately without LangChain or a vector database, so that chunking, embedding, retrieval, and quality-checking generation output all stay explicit and auditable — the same instinct your KI-Agenten work needs: automate the analysis, but keep every step interpretable enough to trust.

I will name the gaps directly rather than talk around them. I have not worked with Power BI, and I have not built a multi-step AI agent on a dedicated orchestration framework — my agent-adjacent experience is the RAG pipeline above, built framework-free by choice. Both are close, learnable steps from what I already do daily in Python, SQL, and FastAPI. I have no direct banking or credit-risk domain experience, but I have spent 2.5 years inside a regulated financial-services data environment, which is the closest adjacent ground I can offer honestly.

I am currently pursuing an MSc in Data Science at the University of Europe, available immediately as a Werkstudent, and comfortable working in your Berlin office near Berliner Straße. English is my working language; my German is at A1/A2 and actively improving, and I am glad to apply auf Deutsch as that improves.

I would welcome the chance to discuss how I could support your team's analytics and AI work. Thank you for considering my application.

Best regards,
Deepak Katukuri
