Dear Seven Senders Hiring Team,

I'm writing to apply for the Working Student role on your AI Taskforce. Seven Senders' approach to AI — a dedicated taskforce that goes into workshops with business teams and ships hands-on solutions, rather than a top-down mandate — is exactly the kind of AI work I want to do: close to the people who feel the friction, measured by whether it actually saves them time.

I build AI tools end-to-end. I wrote a framework-free Retrieval-Augmented Generation pipeline from scratch in Python — no LangChain, no LlamaIndex, no vector DB — specifically so every retrieval mechanic (chunking, embedding, similarity search, prompt assembly) stayed explicit and handoff-ready, which mirrors your requirement to document engagements so they can be maintained independently. Separately, I built a full-stack health app (React/FastAPI/PostgreSQL) end-to-end: translating an operational tracking need into a working feature with a rule-based recommendation engine and an analytics dashboard, then scoping the next iteration (an ML forecasting tier) before building it — the same scoping-to-production motion your role asks for.

On the API and scripting side, I'm comfortable end-to-end: Python, FastAPI, REST design, Docker, CI/CD. I haven't yet built on Make.com specifically, and I'll say that plainly rather than dress it up — but I've picked up every tool I've used the same way I'd approach Make.com: read the docs, build something real with it fast, and go past the surface. Two and a half years as a production Software Engineer at ValueMomentum trained the other half of this role's core skill: translating what underwriting and claims stakeholders actually needed into technical specs they could not have written themselves, then defending those specs through QA/UAT with the same non-technical colleagues.

I'm currently pursuing an MSc in Data Science at the University of Europe in Germany, available immediately as a Working Student, and based close enough to Berlin that hybrid work is straightforward. English is my working language; my German is at A1/A2 and improving.

I'd welcome the chance to talk through how I'd approach a use case for your AI Taskforce. Thank you for considering my application.

Best regards,
Deepak Katukuri
