colayer Hiring Team
Berlin, Germany

Re: Product Manager, Core Team (Working Student / Part-Time)

Dear colayer Team,

I'm a Data Science MSc candidate in Berlin who builds product end-to-end and, increasingly, builds the AI-agent tooling that runs that work — which is exactly the intersection your core team role sits at. I'd like to help shape colayer's product and its Operating System.

Concretely: I designed and run a 5-role AI agent pipeline (diagnosis → rewrite → review → recruiter-simulation → hiring-manager-simulation) driven by a persistent instruction file that turns a raw brief into a verified, tailored output — the same discipline your JD describes as "turning ideas into clear requirements... precise enough for AI agents to execute on." I also shipped the RA Nutrition & Lifestyle App solo: React/Tailwind frontend, FastAPI + PostgreSQL backend, JWT auth, a rule-based recommendation engine, and a scoped (not over-built) V3 roadmap — the same product loop of scope, ship, measure, iterate I'd bring to your backlog. And on the RAG Pipeline project, I hand-rolled a retriever, validated it against a LangChain rebuild, caught a silent 0.06-recall regression from a framework default before trusting it at scale, and have since extended it into an agentic, self-correcting retrieval loop that checks its own retrieval confidence and re-queries before generating — a habit of verifying before shipping that I'd carry into PRDs and specs.

Honestly: I haven't used Airtable, Make, or n8n yet. My automation experience is Python/LangChain and PL/SQL-based, not no-code tooling. Given how fast I picked up LangChain (including finding and fixing a bug in it within days of adopting it), I'm confident I'd be productive in your stack quickly — but I'd rather say this upfront than have it surface later.

I'm currently studying (MSc Data Science, University of Europe, Sep 2025 – present) and based in Potsdam, a short trip from your Berlin office, so a working-student or part-time arrangement around my course schedule would be ideal, and I'm happy to work hybrid or fully remote. I could start beginning of October 2026 as your posting targets.

I'd welcome the chance to talk through fit and working arrangement in an interview.

Best regards,
Deepak Katukuri
