TECHNICAL SKILLS

Languages: Python, SQL, PL/SQL, Core Java, C++

Machine Learning: Scikit-Learn, statistical evaluation (recall@k, MRR, hit@k), classification, ensembles, NumPy, Pandas, Matplotlib, Seaborn

Tools: Git/GitHub, pytest, Jupyter, IBM Watson

Deep Learning: PyTorch, TensorFlow, CNNs, EfficientNet, neural networks, fine-tuning, timm, Hugging Face

LLM & RAG: Retrieval-Augmented Generation, LangChain, hybrid retrieval (BM25 + dense, RRF), reranking, pgvector, CLIP, DistilBERT, sentence-transformers, contrastive learning, embeddings, Ollama, prompt engineering

Full-Stack: React, Vite, Tailwind CSS, React Query, PostgreSQL, FastAPI, Recharts

MLOps & Cloud: Docker, Kubernetes, AWS, CI/CD, model deployment

EDUCATION

MSc Data Science

University of Europe, Germany

Sep 2025 – Present

BTech – CS & Engineering

MLRIT, India

Jun 2018 – Jul 2022

CERTIFICATIONS

PL/SQL – Database Management

Core Java – Software Development

OneShield – P&C Insurance

LANGUAGES

English – Fluent

German – A1/A2 (learning)

PROFILE

Data Science MSc candidate with 2.5 years of production software engineering, specializing in large-scale data extraction/validation and statistical analysis. Built and validated PL/SQL migration scripts across 4 production data domains at ValueMomentum, ran rigorous statistical evaluation (recall@k, MRR) on a hand-built RAG retriever, and shipped a full-stack analytics app (React + FastAPI + PostgreSQL). Seeking a working-student Data Science role in Germany.

PROJECTS

RAG Pipeline – Hand-Rolled Retrieval, Validated Against LangChain at Scale

Python · LangChain · BM25 + dense hybrid · pgvector · Ollama · github.com/Deepak589/RAG_pipeline

- Evaluated a hand-rolled hybrid retriever (BM25 + dense bi-encoder, RRF fusion, cross-encoder reranking) using statistical IR metrics — recall@k, MRR, hit@k — across 4 iterative build stages on a 55-question labeled golden set, reaching 0.833 recall@5 / 0.672 MRR before reaching for a framework.
- Rebuilt the same retriever on LangChain over the identical corpus and labels, framework as the only changed variable, and statistically isolated a 0.06-recall regression to LangChain's default BM25 tokenizer — fixed it to 0.854 recall@5, confirming framework parity before trusting it at scale.
- Scaled the corpus ~100x (7 to ~740 documents, ~3.5GB across arXiv, SEC filings, Wikipedia, and scanned PDFs) with a resumable, file-type-routed ingestion pipeline feeding a pgvector-backed dense store.

RA Nutrition & Lifestyle App – Full-Stack Health Automation

React · FastAPI · PostgreSQL · Recharts · personal product build

- Translated operational health-tracking needs into a shipped full-stack feature: React/Vite/Tailwind frontend over a FastAPI + PostgreSQL backend (4 logical schemas), with JWT auth and token refresh.
- Built a rule-based recommendation engine and a weekly analytics dashboard (Recharts) that closes the loop from raw meal/symptom logs to actionable output for the end user.
- Architected (not yet shipped) an ML forecasting tier — scikit-learn/XGBoost and PyTorch LSTM/GRU/TCN — for flare-risk prediction, scoping the next iteration before building it.

Food Image-to-Recipe Retrieval – Multimodal Deep Learning

PyTorch · CLIP ViT-B/32 · DistilBERT · InfoNCE · MSc final project

- Built a dual-encoder retrieval model mapping food images (frozen CLIP ViT-B/32) and recipe text (DistilBERT, separate ingredient/instruction streams) into a shared 1024-d space trained with symmetric InfoNCE contrastive loss.
- Reached a validation median rank of 10/200 with semantically correct top-5 results on a 13.5K-image Kaggle dataset, and cut training time ~10x by pre-computing and caching CLIP image features.

EXPERIENCE

Software Engineer

Mar 2022 – Sep 2024

ValueMomentum

- Migrated full policy, claims, premium, and customer history for the Surety Bonds line from a legacy policy admin system into OneShield PAS, extracting and validating data via PL/SQL migration scripts across customer, policy (PID), claims, and premium tables.
- Root-caused a recurring data-integrity defect where claims data for pre-2019 Surety bonds under one bond type loaded empty — the OneShield object copy from the stored object to the loading object silently failed when another bond shared the same bond type under a different bond ID — and kept records current with a weekly backfill script pending a permanent fix.
- Translated business requirements from underwriting and claims stakeholders into technical specs during sprint planning, then accelerated releases by running QA/UAT test cases and supporting CI/CD deployment across the full policy lifecycle.
- Maintained 2 enterprise P&C insurance and surety-bond applications on OneShield PAS, resolving production defects across policy workflows.

ML Intern

Jun – Jul 2019

SmartBridge × IBM

- Built a lung-cancer risk-prediction ensemble (Random Forest, KNN, Gradient Boosting, Neural Network) and deployed it via IBM Watson ML, communicating results to non-technical reviewers with Matplotlib/Seaborn visualizations.
