Application — Werkstudent Data Science

Dear nerou Team,

I am applying for the Werkstudent Data Science position. Your work compresses complex operational data from wastewater treatment plants into decision support via machine learning — reducing cost while protecting resources and the environment is exactly the kind of applied ML I want to build, not just study.

Three things from my background map directly onto what you need:

Data extraction and validation at scale: at ValueMomentum, I built and validated PL/SQL migration scripts moving full policy, claims, premium, and customer history for an entire insurance product line into a new production system — including root-causing a data-integrity defect that was silently dropping claims records. That is the same discipline your team needs when validating large, messy operational datasets before they reach an ML pipeline.

Statistical evaluation of ML systems: I built a hybrid retrieval system from scratch and evaluated it with recall@k, MRR, and hit@k on a labeled 55-question benchmark, then used those same statistics to catch and fix a 0.06-recall regression when I rebuilt it on LangChain. I default to measuring before trusting a result — the same rigor "geeignete statistische Methoden" implies.

Machine learning breadth: from a lung-cancer risk-prediction ensemble deployed on IBM Watson ML, to a CLIP-based multimodal retrieval system, to the retrieval work above, I have shipped models across classical ML, deep learning, and modern retrieval methods.

One thing I will name directly: my German is currently A1/A2 — I am learning, but not yet fluent. My English is fluent, and I can contribute to a data/ML team immediately in English while continuing to build German day to day. If day-to-day team communication needs to run in German, I would rather you know that upfront than find out later.

I am based in Potsdam, near Berlin, currently pursuing an MSc in Data Science at the University of Europe — available now as a Werkstudent, and happy to discuss a full-time path after graduation, which your posting mentions you are open to as well.

Thank you for considering my application — happy to send transcripts or references, and glad to talk through any of the projects above in more detail.

Best regards,
Deepak Katukuri
