Linde GmbH, Corporate Office
Pullach (near Munich), Germany

Re: Working Student - AI Engineering (Generative AI & Agents) (m/f/d), req33765

Dear Mr. Voigtländer,

I'm applying for the Working Student position in AI Engineering (Generative AI & Agents) at your Corporate Office in Pullach. I'm enrolled full-time in an MSc in Data Science at the University of Europe, and before that I spent 2.5 years as a software engineer at ValueMomentum, working on live platforms for two insurance carriers. I can relocate to the Munich area.

The closest match to your posting is JobPilot, a LangGraph agent workflow on the Claude API. It pulls postings from 7 job boards through REST APIs, diagnoses each one, rewrites my CV bullets from prompt templates I keep under version control, and refuses to write any claim it can't back with evidence. It has 16 nodes, human review steps, crash recovery, per-run cost tracking and 238 tests. I learned to evaluate before adopting: a cross-encoder reranker looked like an obvious upgrade, so I ran it against plain cosine retrieval on a labeled set. It scored 14/15 to cosine's 15/15, and I left it out.

For connecting agents to data and APIs, I wrote a TypeScript MCP server with 15 tools that wraps the Apify API and runs inside Claude Code. My RAG pipeline sits on pgvector, with a corrective loop where Claude grades the retrieved results and refuses questions the corpus can't answer. It reached 100% correct refusal and 69.5% end-to-end correctness, and checking it against a LangChain rebuild on a 55-question golden set caught a silent 0.06-recall regression from a default tokenizer. At ValueMomentum I moved policy, claims and premium history between enterprise systems with PL/SQL, and resolved more than 100 production defects. Working with business data that has to stay correct is familiar to me.

To be direct about gaps: I have not worked on formal AI compliance. The nearest I have is regulated insurance data and JobPilot's rule that blocks unsupported claims. My agents have also had one user, me, and I have not run one for a business unit. Supporting your AI product teams with proofs of concept, prototypes and documentation would be where I learn how Linde handles quality, reliability and governance in practice.

What interests me about Linde is the range: chemicals, food, electronics, healthcare and manufacturing all produce different data and different processes worth automating. I'm studying in Germany and can work as a working student alongside my degree now, with interest in joining full-time after graduation. I'd be glad to walk you through JobPilot and the MCP server in an interview.

Best regards,
Deepak Katukuri
